

GitHub Copilot Pro Access for Students via GitHub Education

Best Path: GitHub Education Student Verification (Free Copilot Pro Access)

Verified students through GitHub Education get **free access to GitHub Copilot's premium features** (equivalent to Copilot Pro). This is the most direct route — no financial aid processing needed.

What Your Students Need to Do

1. **Create a GitHub personal account** (if they don't have one already).
2. **Navigate to** github.com/settings/education/benefits.
3. **Click “Start an application”** and complete the student verification process.
4. **Provide proof of enrollment**, such as:
 - A school ID with current enrollment date
 - Class schedule
 - Transcript
 - Enrollment verification letter
5. Once verified, they can activate **Copilot Student** from their Education benefits page.

Important Notes for Your Program

- **SWTC must grant degrees, diplomas, or certificates** — which it sounds like it does, so students should qualify.
 - Students need to prove **current enrollment status** — if SWTC does not issue academic email addresses, students can submit official documentation (school webpage or a letter on school letterhead) instead.
 - If SWTC's email domain isn't recognized by GitHub, contact [GitHub Education Support](#) with the school's name, website URL, and email domain.
 - GitHub **reevaluates eligibility monthly**, so students need to maintain active enrollment.
-

Optional: GitHub Campus Program (School-Wide)

If SWTC wants a more formal partnership, you (or a school administrator like a CTO/CIO, Dean, or Department Chair) can apply for the [GitHub Campus Program](#), which gives the whole school free access to GitHub Enterprise Cloud/Server. This is a school-level commitment, not individual student applications.

Recommended Action

Direct each student to github.com/settings/education/benefits to apply individually. The student verification route is the simplest and fastest path to free Copilot access.
