

Python Programming Foundations

Week 8 - Capstone Build, Justification, & Presentation
Day 2: "Revision Staging & Presentation Readiness"

1

Today May Not Need A Lecture

 Today is a final-work session.

 Depending on class needs, we may use a short reset, begin presentations, or move directly into capstone build and support time.

2

Three-Mode Session

Different needs. Different modes. Same goal: steady progress.

I choose the mode that best fits the class needs today.

 **BUILD SUPPORT**
Focused time to build, ask questions, and solve problems.

- Get unstuck
- Clarify the next step
- Make steady progress

 **SHORT RESET**
Pause, regroup, and reset for a fresh start.

- Step back
- Refocus
- Plan the next move

 **PRESENTATIONS**
Share progress, learn from peers, and build confidence.

- Show your work
- Share what works
- Learn from others

 The mode can change anytime based on what helps us learn best.

Today May Not Need A Lecture

3

Revision Is Not Retreat

 Revision is not retreat.

 When a project touches reality, changing, cutting, or simplifying something can make the final result stronger.

4

Revision Is Strengthening

We refine our work to make it clearer, stronger, and more reliable.

FIRST VERSION
Good start. The idea is here.

Goal
Track pocket money.

What it does
Add money.
Subtract money.

Notes
Works for basic use.
More to improve.

Refine and strengthen

CLEARER FINAL VERSION
Stronger, clearer, and easier to trust.

Goal
Track income and spending to see your balance.

What it does
Add income.
Subtract spending.
Show current balance.

Improvements
Clear menu.
Balance always visible.
Ready to expand.

 Each revision builds a stronger foundation for what comes next.

Revision Is Not Retreat

5

Reality Contact Reveals Priorities

Running the project may reveal:

- a feature is too large
- a data format is harder than expected
- an output needs to be clearer
- a smaller core is the better final version

6

Record One Meaningful Revision

Before final submission, record one meaningful revision:

- what changed
- why it changed
- how the project became stronger or more realistic

Small changes. Clear reasons. Stronger project.

10

Southwest
Tech

Presentation Is Explanation

Your final presentation should explain:

- what you built
- what problem or purpose it addresses
- how you tested or validated it
- what changed during the project
- how AI was used, if applicable
- how the main logic works (only if asked)

11

Southwest
Tech

Presentation Sequence

A clear order that helps your audience follow your thinking.

Lead with understanding. Support with evidence. Share the thinking behind your work.

Presentation Is Explanation

12

AI Use Must Be Accounted For

If AI helped, explain:

- ▶ what AI contributed
- ▶ what you accepted
- ▶ what you changed or rejected
- ▶ how you verified the result
- ▶ what decisions remained yours

13

My Work. My Responsibility.

AI can help. I make the decisions. I stand behind the result.

- 1 AI CONTRIBUTED**
I used AI to explore ideas, get suggestions, or solve part of the problem.
AI is a tool. I am the owner.
- 2 I ACCEPTED, CHANGED, OR REJECTED**
I reviewed the suggestion and decided what to keep, change, or not use.
I choose. I take ownership.
- 3 I VERIFIED**
I checked the result, tested it, or confirmed it works as expected.
I check. I confirm.
- 4 I DECIDED**
I made the final call and stand behind the work as my own.
I decide. I am accountable.

I am responsible for my work.
AI supports my process. My decisions define my work.

Proud of my process.
Proud of my work.

AI Use Must Be Accounted For

14

Presentation Staging

- ▶ Be ready to run the project
- ▶ Explain the purpose first
- ▶ Show meaningful behavior
- ▶ Discuss validation
- ▶ Answer questions about your choices

15

Southwest
Tech

Presentation Ready

You are ready when you can demonstrate, explain, and discuss your project.

1

RUN THE PROJECT

I can start the project and show that it runs as expected.

I can run it smoothly.

2

EXPLAIN PURPOSE

I can explain the goal of the project and why it matters.

I can state the purpose clearly.

3

SHOW BEHAVIOR

I can demonstrate the main features and walk through how it works.

I can show the core behavior.

4

DISCUSS VALIDATION

I can show evidence that it works and explain how I tested it.

I can explain my validation.

5

ANSWER QUESTIONS

I can respond to questions about my choices and results.

I can listen and explain clearly.

★ You are ready when you can run it, explain it, and discuss it with confidence.
Clarity. Evidence. Understanding.

Presentation Staging

Move Into Final Work

Use the remaining time for the highest-value final task:

- ▶ finish the working core
- ▶ validate important behavior
- ▶ complete run instructions
- ▶ prepare presentation explanation
- ▶ present if scheduled

17

Southwest
Tech

Final Priorities Checklist

Focus on these before moving to anything else.

	1 FINISH WORKING CORE	The main features work as planned and produce the expected results.	☐
	2 VALIDATE BEHAVIOR	I have evidence that it works correctly across key cases.	☐
	3 COMPLETE RUN INSTRUCTIONS	Someone else can run the project using my instructions.	☐
	4 PREPARE EXPLANATION	I can clearly explain purpose, behavior, and validation.	☐
	5 PRESENT IF SCHEDULED	I am ready to present and answer questions about my project.	☐

Small steps. Clear evidence. Confident presentation.
You've got this.

Move Into Final Work
