## Demo: Add Page Regions

First improve the shape.  
Then add more pages.

In `index.html`:

- ▶ wrap the top content in `'header'`
- ▶ add `'main'` for page content
- ▶ use `'section'` for grouped ideas
- ▶ add `'footer'` for closing information

10

---

## Navigation Links Connect Pages

## Navigation Links

11

---

---

---

---

---

---

---

## Demo: Create About Page

`'href'` points to a file.  
The file name must match.

Example:

- ▶ file: `'about.html'`
- ▶ link: `'href="about.html"'`

If one character changes, the link can break.

12

---

---

---

---

---

---

---

Southwest  
Tech

Broken links are usually exact-match problems.

|                    |                 |              |              |
|--------------------|-----------------|--------------|--------------|
| file name mismatch | wrong extension | missing file | wrong folder |
|--------------------|-----------------|--------------|--------------|

↓

Debug by comparing the `href` to the actual file name.

**Common Failure:**

**Exact-Match**

13

Southwest  
Tech

**Why a Link Can Break:  
Exact-Match Matters**

File on your site  
**about.html**

href value in your link  
**abot.html**  
missing "u"

File names and href values must match exactly.

**Common Failure:**

**Exact Matching**

14

---

---

---

---

---

---

---

---

**Thinking Tool**

Structure check:

- ▶ Can I explain each section?
- ▶ Do headings make sense?
- ▶ Can I move between pages?

If the answer is yes, the site is becoming easier to maintain.

## Improving Structure, Not Design

Before: Loosely Organized

→

After: Clear Structure

Refinement can mean *clearer structure*, not more decoration.

## Structure Refinement

16

---

---

---

---

---

---

---

---

Southwest  
Tech

## Lab Refinement

Improve the first version.

- ▶ grow toward at least 3 pages
- ▶ fix links
- ▶ improve heading hierarchy
- ▶ clean content organization
- ▶ keep it HTML-only

Assignment target:

- ▶ multiple pages
- ▶ clear structure
- ▶ links between pages
- ▶ final reflection after refinement

17

---

---

---

---

---

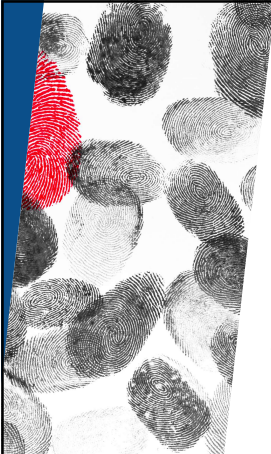

---

---

---

Southwest  
Tech

## Evidence & Reflection

Submit:

- ▶ HTML files
- ▶ working navigation
- ▶ 2-3 sentence reflection

Reflection prompt:

*What changed between your first version and final version, and why?*

### How To Read Next Week's Material

*Required:* CSS rules and color.  
*Skim:* text readability.  
*Reference:* return during lab.

Focus on:

- ▶ what CSS changes
- ▶ how CSS connects to HTML
- ▶ how color and text affect readability

Do not memorize every CSS property.

---

---

---

---

---

---

---

---

Southwest Tech

### Closing Success Check

If someone can move through your site and understand it, your structure is working.

Before submitting, check:

- ▶ each page opens
- ▶ each link works
- ▶ each page has a clear purpose
- ▶ no CSS is required yet
