Lab Review: One Successful HTML Path

One successful Week 1 path:

- ▶ at least three pages
- ▶ clear headings and paragraphs
- ▶ lists where useful
- ▶ navigation between pages
- ▶ semantic regions

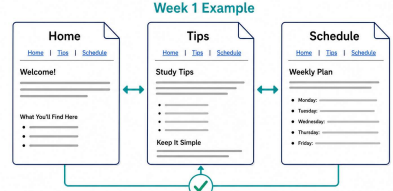

What we will see is one acceptable path, not the only answer.

4

One Successful HTML-Only Multi-Page Site

Week 1 Example

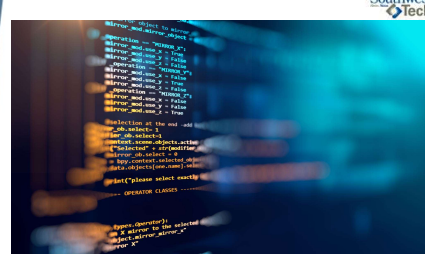

All pages link to each other.

One successful path. Not the only answer.
If something breaks, revise, recover, and try again. Progress matters.

Successful HTML Path

5

Review Coding Lab

6

What Week 1 Proved

the browser can read your files
pages can link to each other
headings and sections create meaning
plain can still be correct

Going forward: "CSS should improve the experience without replacing the structure."

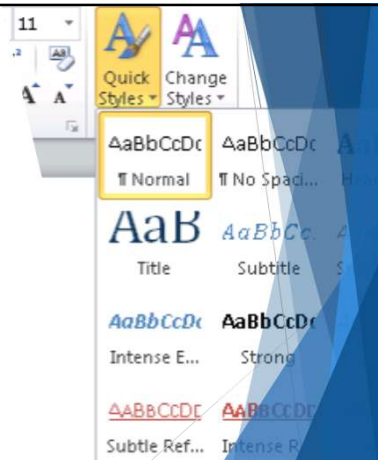

7

CSS Is A Separate Layer

CSS controls appearance.

- ▶ color
- ▶ font
- ▶ spacing
- ▶ readable line length
- ▶ visual consistency

HTML still controls structure and meaning.

8

What Counts as Success Today

- one stylesheet is connected
- one rule visibly changes the page
- you can name the selector
- you can name one property and value
- the page remains readable

9

What We Will Use Today

- ▶ 'styles.css'
- ▶ stylesheet link
- ▶ selector
- ▶ property
- ▶ value
- ▶ save and refresh

10

Today's Beginner CSS Toolbox

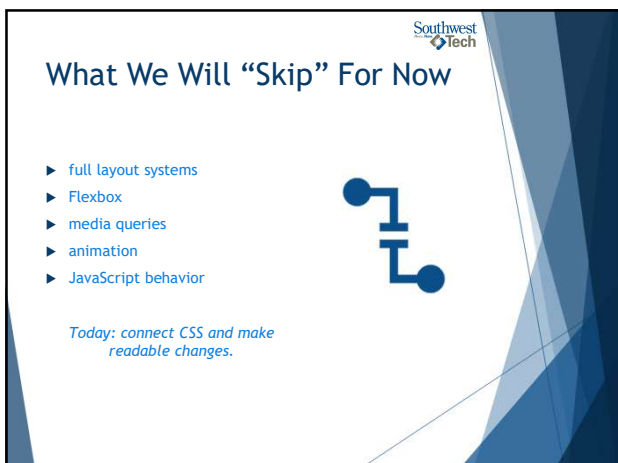

The tools we are using now.

styles.css stylesheet link selector property value save refresh

Small steps. See one change. Keep going.

Toolbox

11

What We Will "Skip" For Now

- ▶ full layout systems
- ▶ Flexbox
- ▶ media queries
- ▶ animation
- ▶ JavaScript behavior

Today: connect CSS and make readable changes.

Week 2: Web Development Foundations

Parked for Later

These topics matter – and they will have their turn.

P PARKED FOR LATER

Flexbox

media queries

animation

JavaScript

design frameworks

Useful later. Not today's job.
We focus on one small step at a time.

Parked For Later

13

Tech

The Shape of a CSS Rule

One rule controls how an element looks.

selector: h1

```
h1 {  
  color: #204b57;  
}
```

property: color value: #204b57

Selector chooses. Property changes. Value sets.

A CSS Rule Has Parts

14

Southwest
Tech

External Stylesheet Connection

The HTML page must link to the CSS file.

In 'head':

```
<link rel="stylesheet"  
href="styles.css">
```

If the link is wrong, the CSS rules are ignored.

15

Southwest
Tech

HTML Page Connected to an External CSS File

The HTML file links to the CSS file.

index.html

```
<header>
<nav>
<main>
<footer>
```

styles.css

```
{
.
.
.
}
```

<link rel="stylesheet" href="styles.css">

The file name must match.
If the name is different, the styles will not be applied.

External Stylesheet Connection

What to Watch For

- ▶ stylesheet link
- ▶ first visible change
- ▶ one selector at a time
- ▶ save and refresh
- ▶ HTML content staying the same

18

Southwest
Tech

What Changed And What Did Not

CSS changed:

- ▶ text color
- ▶ background color
- ▶ font
- ▶ line length
- ▶ line spacing

CSS did not change:

- ▶ headings as headings
- ▶ paragraphs as paragraphs
- ▶ links as links
- ▶ page meaning

19

CSS Changes Appearance. HTML Meaning Stays the Same.

Before: Plain HTML

After: Same Content, Better Appearance

Welcome to Our Site

This is a simple page created with HTML. It has a heading, a paragraph, and a link. The goal is to share helpful information in a way that is easy to read.

[Learn more about us](#)

H heading stays heading

P paragraph stays paragraph

link stays link

Appearance changed. Meaning stayed.

What Changed And What Did Not

20

Southwest
Tech

Common Mistakes

- stylesheet not linked
- wrong file name
- missing `{}`
- missing `:`
- missing `;`
- expecting unsaved changes to appear
- "Check Connection First"

21

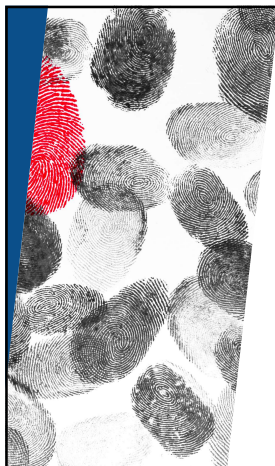

Lab

Southwest
Tech

Add the first CSS layer.

- ▶ create `'styles.css'`
- ▶ link it to your site
- ▶ style text, color, and spacing
- ▶ keep the site readable
- ▶ do not rebuild the HTML

22

Evidence

Southwest
Tech

Evidence for the Lab:

- ▶ HTML files still open
- ▶ `'styles.css'` exists
- ▶ at least one page links to it
- ▶ visible style changes appear
- ▶ readability improves or stays clear

23

Closing Success Check

Southwest
Tech

- ▶ If CSS is linked, one rule visibly works, and the page is still readable, you are on track.
- ▶ Style is a layer.
- ▶ Structure stays underneath.
