One Styled Page Grows Into a Consistent Small Site

Apply the same simple styles across pages.

One styled page

Consistent small site

Consistency makes pages feel related.

From Styled Page To Styled Site

4

Southwest Tech

What Counts as Success Today

- the same CSS file styles more than one page
- navigation looks consistent
- text is readable
- spacing is less crowded
- one class-based style is used on purpose

5

Southwest Tech

One Stylesheet Can Serve Many Pages

Each page links to the same CSS file.

- index.html -> styles.css
- about.html -> styles.css
- tips.html -> styles.css

Change one CSS rule.
Check every page that uses it.

6

Southwest Tech

Many HTML Pages. One Shared Stylesheet.

All pages use the same styles.css file.

```
graph LR; index.html --> styles.css; about.html --> styles.css; tips.html --> styles.css;
```

index.html
Home page

about.html
About us page

tips.html
Tips and tricks page

styles.css
Shared stylesheet

Change one CSS rule. Check every page.

One Stylesheet Serves Many Pages

7

Southwest Tech

Class Names Mark Reusable Parts

Class names help CSS find repeated parts.

HTML:

```
<header class="site-header">
```

CSS:

```
.site-header {  
  background: #204b57;  
}
```

The dot in CSS means class.

8

Southwest Tech

HTML Class Attribute vs. CSS Class Selector

Same name. Different places. Same purpose.

HTML	CSS
<pre><header class="site-header"></pre> This element has the class site-header.	<pre>.site-header { background: #204b57; }</pre> This selector targets elements with the class site-header.

The dot in CSS means class.

Class Names & Class Selectors

9

Specificity, Gently

- When two rules could apply, the browser must choose.
- more specific selectors usually win
- later rules may override earlier ones
- class selectors target named parts
- inspect the rule before guessing

10

When More Than One Rule Could Apply...

The browser chooses which rule to use.

Broad rule
CSS Rule
`h1 { color: teal; }`
Applies to all h1 elements.

Browser chooses
Example HTML
`<h1 class="site-header">Welcome</h1>`
↓
Welcome
(appears navy)

More specific rule
CSS Rule
`.site-header h1 { color: navy; }`
Applies to h1 inside .site-header.

Search icon: CSS conflicts are checkable, not random.

Specificity Gently

11

Demo

"Shared Stylesheet"

12

What to Watch For

- ▶ same CSS link on multiple pages
- ▶ class names in HTML
- ▶ shared rules in 'styles.css'
- ▶ one change affecting more than one page
- ▶ navigation becoming consistent

13

Inspect The Result

Inspect after styling:

- ▶ Do both/all pages still open?
- ▶ Is the stylesheet linked?
- ▶ Does navigation look consistent?
- ▶ Is text easier to read?
- ▶ Did spacing improve?

Refine and Inspect: Check Your CSS Across Pages

Small checks on more than one page build a consistent site.

Simple CSS Inspection Checklist

- ✓ both pages open
- ✓ stylesheet linked
- ✓ navigation consistent
- ✓ text readable
- ✓ spacing improved

[Small refinements. Check both pages. Keep improving.](#)

Inspect The Result

15

Common Mistakes

- linking CSS on one page only
- changing HTML just to make space
- using random colors
- making text harder to read
- using inline styles everywhere
- forgetting to check every page

16

Lab Refinement

Refine the styling layer.

- ▶ link one CSS file across pages
- ▶ improve readability
- ▶ make navigation consistent
- ▶ adjust spacing
- ▶ use at least one class-based style

Do not add JavaScript yet.

17

Thursday: CSS Refinement, Not Rebuilding

Same site. Better spacing, consistent navigation, easier to read.

Before: Needs Refinement

After: Refined with CSS

Refine the styling layer. Keep the structure.

Lab Refinement

18

Evidence & Reflection

- ▶ HTML files
- ▶ 'styles.css'
- ▶ pages that render correctly
- ▶ visible consistency across pages
- ▶ 2-3 sentence reflection

Reflection:

What design changes improved readability or usability?

19

How To Read Next Week's Material

Required: understand boxes and spacing.
Skim: layout examples for the big idea.
Reference: return during lab for Flexbox/media queries.

Focus on:

- ▶ - margin, padding, border
- ▶ - elements as boxes
- ▶ - layout as controlled space

Do not memorize every layout technique.

20

Week 3 Preview: Boxes and Spacing

CSS controls the space around every element.

Week 3 Reading Preview

- Required:** boxes and spacing
Understand the box model and how spacing works.
- Skim:** layout examples
Browse examples of simple layouts and spacing.
- Reference:** Flexbox and media queries
Save for later. We'll use these when we're ready.

→ Next week: CSS controls space.

Closing Success Check

If ...

- ▶ one stylesheet supports the site
- ▶ the pages are readable
- ▶ the design choices are intentional

... your CSS layer is doing its job.
